Abstract. Abstract up to 100 words. The article explores the application of electronic tools in coaching control for volleyball competitions, including video analysis, biomechanical systems, physical activity trackers, as well as the use of artificial intelligence and statistical analysis. Key areas of technology application are described, such as tactical and technical evaluation, physical condition monitoring, and training process individualization. The relevance of this research is substantiated by factors such as increased sports competition, workload individualization, advancements in sports medicine, and the growing accessibility of digital technologies. The article identifies key research tasks, including the development of video analysis models, assessment of wearable sensor effectiveness, AI-based game situation prediction, and the impact of electronic tools on team interaction and psychological preparation. The conclusion highlights the importance of integrating advanced technologies to enhance the training process efficiency and ensure athlete safety.

Key words: Key words up to 5 words. digital technology, electronic tools, training control in volleyball.

The template is designed to prepare these materials for printing. The volume of materials should be TWO full pages (A4 format).

Document formatting. Document margins: top — 2.5 cm, right — 2.0 cm, bottom — 3.0 cm, left — 3.0 cm. Line spacing — single. Do not include page numbers. First line indent — 0.5 cm (main text).

The text is typed in two columns, column width 7.5 cm, distance between columns 1 cm.

The title of the report, authors, name of the organization and the main text are printed in Times New Roman 10 pt.

The text must be printed with hyphens (hyphens in the title are not allowed). To improve the structure, the text can be divided into sections (Purpose, Methods, etc.). Sections are not numbered. The title of the report and section headings are printed in bold, straight font.

Formulas. When formatting mathematical formulas, use Times New Roman and Symbol fonts. Formulas are centered and have an additional 5 pt space above and below the main text. The formula number is located in the right margin and is enclosed in parentheses (1). Formulas must be followed by a comma or a period if the formula is at the end of a sentence. Formulas must be numbered sequentially. References to formulas in the text are enclosed in parentheses.

$$(\partial_t^2 - a^2\partial_x^2)u(t,x) = f(t,x),$$
$$t > 0, x \in (\gamma(t), l), \quad (1)$$
$$u(0,x) = \varphi(x), \partial_t u(0,x) = \psi(x) -$$
$$-\begin{cases} 0, & x \in [0,l), \\ v, & x = l, \end{cases} x \in [0,l], \quad (2)$$
$$\alpha(t)\partial_t u\big(t,\gamma(t)\big) + \beta(t)\partial_x u\big(t,\gamma(t)\big) +$$
$$+ \theta(t)u\big(t,\gamma(t)\big) = \mu_1(t), t \in [0,\infty), \quad (3)$$
$$\partial_t^2 u(t,x=l) + \lambda\partial_x u(t,x=l) =$$
$$= \mu_2(t), t \in [0,\infty), \quad (4)$$

where $\gamma(0) = 0$, $\gamma'(t) \in (-a,a)$, $t \in [0,\infty)$, the curves $x = \gamma(t)$ and $x = l$ do not intersect, the boundary condition (3) is nowhere characteristic, i.e., $\alpha(t) \neq a^{-1}\beta(t), t \in [0,\infty)$.

Figures and tables. Figures should be black and white or halftone (grayscale). Scanned images should have a resolution of at least 300 dpi. Text in figures should be clear, text size should be legible. Tables should not duplicate graphs. Tables and figures follow their mention in the text. Each table and figure has a title. When referring to the text: "in Figure 1" and "in Table 1". The title of the tables and captions under the figures are formatted in Times New Roman 9 pt. Figures and tables are centered and spaced with an additional 5 pt interval above and below the main text.

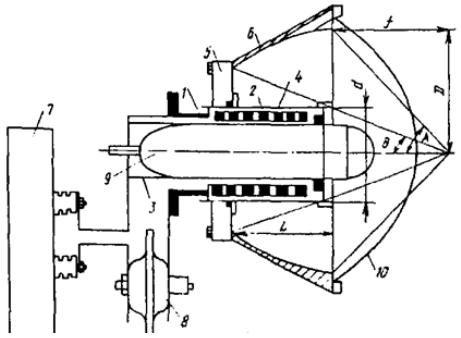

Figure 1 – An electromagnetic shock wave generator

Table 1 – Geometrical parameters of proposed antenna

Parameter	Wsub	Lsub	Wp	Lp	Lf
Value(mm)	61.68	59.019	35.96	33.30	17.74
Parameter	Wf	Lg	Wg	Lg1	Wg1
Value(mm)	4.84	18	61.68	12	6
Parameter	L1	W1	L2	W2	
Value(mm)	3	20	10	3	

The device works as follows (Figure 2). A high-amplitude current pulse flows through the inductor, which leads to the appearance of a magnetic field around the conductor.

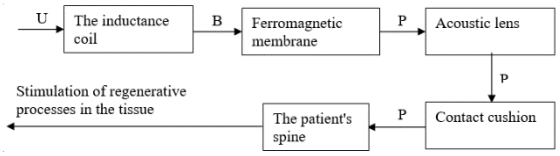

Figure 2 – Block diagram of the shock wave head

References. The list of references is compiled in the order of citation of references in the text, must contain full bibliographic data and is given at the end of the article. References in the text are enclosed in square brackets [1; 3–5].

The list of references should be placed at the end of the report under the heading – References, formatted using Times New Roman 9 pt, single-spaced. The heading is centered and separated by an additional line spacing of 5 pt. above and below the main text. For sources published in translated journals, please provide English titles and a reference in a foreign language.

Acknowledgments. They are indicated at the end of the text, for example:

The report was published with the financial support of the Ministry of Science and Higher Education of the Russian Federationn Federation within the program of the Moscow Center of Fundamental and Applied Mathematics under the agreement № 075-15-2022-284.
